

FOR IMMEDIATE RELEASE

NEW FULL MONTY SADDLE PAD

MARCH 2009

For the bigger saddle, the brawny rider or the more robust ride; this TCS (Total Comfort System) Saddle Pad by Cavallo is two inches longer and twice as thick as the Western AI- Purpose 1001-TCS Saddle.

A result of popular demand, FULL MONTY has been developed to provide extra shock absorption and additional cushioning. Riders will still feel their horse's movement through the close contact pad cutaway, but will now enjoy the additional protection of double memory thickness throughout the saddle bar contact with the horse.

With a reversible design, the FULL MONTY is crafted with the same Cavallo patented Nitrex Closed-Cell Foam that riders have come to know & love in the full line of Cavallo Saddles; Far superior to traditional foams, the Non-PVC foam that has low resilience and low penetration value, resulting in excellent shock absorption, insulation, cushioning and rebound (G-value energy return). Complimented by New Zealand Merino Wool the FULL MONTY Saddle Pad is everything you've come to expect in Cavallo Pads and more.

The combination of 100% Merino wool and lightweight foam gives the FULL MONTY all the customary features we craft into our existing TCS saddle assortment:

**Durability**

- High directional stability to maintain shape
- Resilience
- Breathable and insulating
- Soft and lightweight
- Water-absorption-free
- Wicks away moisture

Available in April 2009.
